

Image Information Server for Storing Image Information

Abstract of the Disclosure

A network system includes a plurality of client terminal computers connected to a network, an image information server connected to the network, which stores image information, and an image input device, e.g. a scanner, connected to the image information server, which inputs image information to be stored in the image information server. An image information determining device determines if the image information read by the scanner is related to format image information, which may include user information or user group information. An image information storing device executes a storing operation of the image information in the image information server based on the format image information, i.e., the user information or user group information.
